Distance Nearest Occupied Building: 500 Feet

Type of Incident: Vehicle Accident

Description of Released Contaminant: diesel fuel from truck saddle tank during accident

Volume Spilled: 50.00 gallons

Ag Related: No

EPA Extremely Hazardous Substance: No

Reported to NRC: Unknown

Cause of Incident:

The accident occurred on 2/23/13 at the intersection of Hwy 83 and 89th St. The Team Drive Away truck was traveling in the north bound lane when a car who was entering the highway struck the passenger side saddle tank. The truck came to rest on the embankment adjacent to the highway. Diesel fuel was released at this location and onto the pavement of the highway.

Risk Evaluation:

none

of Fatalities:

of Injuries:

Affected Medium:

Potential Environmental Impacts:

Photo documentation of the accident site indicates stained soil exists adjacent to the highway where the truck came to rest as well as stained pavement.

Surface water in the drainage adjacent to the highway and groundwater could be impacted if the soil is not removed.

Action Taken or Planned:

The spill was reported to Leon Vetter on 3/5/13.

I am planning on working with K&H Electric to remove stained/impacted soils adjacent to the eastern edge of the highway. I will take post-excavation confirmation samples and provide you a written summary of the excavation activities, sample results and disposal documentation.

Please advise as to whether or not this action is approved by ND Department of Health and please contact me at amber.roesler@abam.com to provide an incident number.

Wastes Disposal Location: Appropriate waste profiling will occur and the soil will be disposed at an approved landfill.

Agencies Involved:

Updates

Date: 3/6/2013 **Status:** Reviewed - Assigned to NDDoH Division **Author:** Roberts, Kris
